

MY HEALTHY SMILE : for fresh breath

We all have bad breath now and then...

What causes it?

- The foods we eat (garlic, onions, spices, etc.)
- Oral health problems
- Mouth breathing, stuffy nose
- Certain illnesses (diabetes, digestive problems, tonsillitis, etc.)
- Medications that dry out the mouth

Drinking water
can help.

How can I get rid of bad
breath?

Brush your tongue and teeth
after meals, and floss
regularly.

Mouthwash, gum and mints are not
the answer. They will only mask the
problem for a while.
